## A Clear Vision for the Future of your Security

Cloudview's cloud video surveillance solutions ensure that all your CCTV footage is stored safely and securely in the cloud, making it easily accessible from anywhere, anytime. Plus, with feature event automated alert notifications as standard, you will always be alerted any potential incidents in real-time.

Whether you're extending the value of your existing analogue surveillance system or ready to fully upgrade to IP, connecting your video to the cloud has never been easier.

### **BUILT TO ENHANCE YOUR EXISTING CCTV EQUIPMENT**

Housing Associations | Education | Travel Infrastructures | Local Authorities | Public Spaces  
Residential Schemes | Construction Sites | Healthcare | Fitness Centres | Property Management  
Retail | Offices | Emergency Services | Underground Car Parks

Cloudview offers you the chance to easily and quickly **gain greater control** and **efficiency of your security**, without the need to change your current hardware!

### What you gain with Cloudview:

✓ **GREATER CONTROL**

Access all the cameras on your network anywhere anytime.

✓ **INCREASED SECURITY**

With intelligent monitoring and notifications, you could be alerted to a potential incident before it even happens.

✓ **LEGALLY ADMISSIBLE FOOTAGE**

The Cloudview solution guarantees a "Chain of Custody" for evidence, that would otherwise not be admissible in a Court of Law. A temporary log in can even be given to the constabulary investigating any crime, so the Police can obtain the CCTV footage themselves.

✓ **GROWTH**

Cloudview's solution can operate as a standalone system, or it can complement your existing system. It is scalable across multiple sites and equipment types and is applicable for 1-1000's of cameras.

✓ **GREATER VISIBILITY**

Not only because you've got anytime, anywhere access but you will also be alerted if any of the cameras on-site become damaged or faulty.

✓ **EFFORTLESS SEARCH AND SHARING**

Easily search by time, date and camera, then download, share, or email the event footage.

✓ **CHOICE**

You choose which smart triggered, specific events you want recording and alerting to.

✓ **PROTECTION AGAINST ONSITE VIDEO RECORDER THEFT**

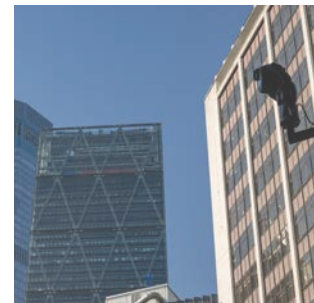

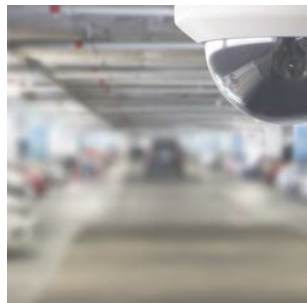

The theft and damage of physical, onsite recorders (NVR/DVR's) has increased in recent years, with Cloudview there is no need for these physical items, so there is no chance of footage being lost.

✓ **INSURANCE PROTECTION**

Cloudview's the role based access and Dual Factor Authentication, enables organisations to protect recorded footage from unauthorised personnel, meaning all footage is completely tamper proof.

✓ **COMPLIANCE**

Built with data security and 'privacy by design' at its core, you can rest assured, with Cloudview you'll have no visual data GDPR concerns.
